

We support the entrepreneurs!

A technological solution that will support our stakeholders and partners by means of integration of aid solutions from various support institutions.

Goal: a tool that will allow for an easy search for financial solutions offered by BGK and other external entities such as: commercial banks, investment funds, development institutions.

The tool will be used by: small, medium and large enterprises, local governments, housing market entities, public institutions and individuals.

The tool should be easy to use. The user will search for financial solutions on the basis of the company's VAT Number (NIP), it's statistical identification number REGON and Polish Classification of Business Activity (PKD).

The user, after entering their data (NIP, REGON, PKD) into the search engine shall receive:

- products and services tailored to the parameters of the company and its needs,
- documents and applications that can be filled in to receive support, unless such applications are available on the website of the financing institution.

This tool should also offer an automated (running in the background) identification of entities using the application in terms of compliance of their profile with the 3W idea. As a result of this identification (based on information available in the Internet), we expect to select entities which could be invited to join the 3W community. The application should suggest to selected users that they are most likely to be active in the 3W field and therefore they are invited to join our community which will support them in developing sustainable projects, products or technologies in the field of water, hydrogen and advanced carbon technologies. Identified entities in the 3W area are to be redirected to idea3w.org

Evaluation criteria:

The search engine must be user-friendly.

The search engine will be used by non-technical people.

The search engine must be able to easily add additional functionalities.

Usefulness of the results - matching the specific needs.

Accuracy of results assessment in terms of 3W (carbon nanotechnologies, green hydrogen, water retention, etc.)
